

WRAP AROUND CARTONER WAT30

WAT30 is an electrical intermittent motion wrap-around cartoner for unpackaged products like case, bottles, can, sack, package from flow pack or even more.

His modular conception allow to WAT30 to be linked at the exit of different machine types, managing the division and even the rotation/overturning of the products, giving to the pack content's the selected format (one or more lines, one or more layers).

The exclusive products alimentation system, made from motorized slide valve belt and relative lateral pusher, allow to model the product lines set in the panel.

The WAT30 cartoner can be linked to productive lines that work in different sectors (food, cosmetic, pharmaceutical,...).

WAT30

The machine made up of different groups:

- SLIDE VALVE BELT GROUP WITH MOULD LOAD
for the launch, division, counting and creation of products lines exited from previous machine
- PRODUCTS PUSHER INTO CARTON GROUP
for the insertion in accordance with quantity format settings of the aligned products and rubberizing of longitudinal strip
- CARTON'S PICK UP AND MODELLER GROUP
for pick up and drop down in the slide valve shifter of the carton
- CARTON'S SHIFTER AND SQUARING GROUP
for the carriage, lateral strip bonding (top and bottom) and carton's total closure
- CARTON'S EXIT BELT GROUP
for the product informations printing (unique code and expiration date) during the exiting and the link with the next machine (ex. palletizing island)
